# Prepare Deployment Host

In this section we are going to discuss how we are going to prepare OpenStack-Ansible host. This is the host that will hold the OpenStack-Ansible playbook Repository and deployment configurations.

Since this guide has been prepared using **Ubuntu Linux 18.04 LTS** operating systems you will not find the instructions on configuring other supported operating systems for OpenStack-Ansible. Please refer to the respective configurations manuals of those operating systems and adjust a particular configuration that suits your needs.
